

# StarBase View

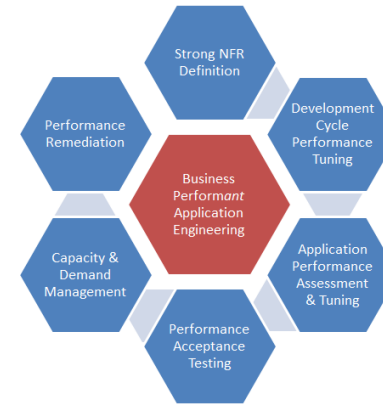

## Typical Current State

- In our experience...
- Capacity requirements rarely considered in application design
- Performance and NFRs first considered during testing
- Development, Performance Testing and Capacity are generally silo'd

## Business Performant Application

- StarBase's vision of how Business Applications can be made "Performant" and not just to "Perform"
- Performant *adj.* effective, efficient, high-performing, responsive, secure, successful
