

HELPING YOU CHOOSE THE RIGHT TESTING TOOLS

As a partner of a number of the leading testing tools vendors, StarBase is also a licensed reseller.

We can provide advice on which tools to choose and then help you to purchase them easily and cost-effectively.

The right tool for the right job

Testing tools are optimised for a particular set of conditions and have different strengths. Choosing the wrong tool can be expensive, time-consuming, and may not give the benefits that you want.

At StarBase, we rely on testing tools for our business, so we have to understand it. Over 20 years we have built strong relationships with key software vendors and an in-depth understanding of their products.

We have carefully selected our tool vendor partners to ensure that we can test applications, infrastructure and networks, to give full coverage of all the elements that affect the performance and function of our clients' systems.

Let StarBase help you choose

Our consultants can advise you on selecting the right product for the job you are doing and then ensure you can buy it easily and at a competitive price.

We are reselling partners of the following providers:

HP is a leader in application testing with a suite of tools that manage the whole software quality lifecycle. HP Quality Center is the industry standard test management tool. HP LoadRunner is the industry standard product for performance testing of screen (GUI)-based applications, while HP QuickTest Professional is a powerful tool for automated functional testing.

Green Hat tools are designed for message-based applications. They enable the automation of SOA and BPM testing with GH Tester and performance testing using GH Performance; and the virtualisation of unavailable applications with Virtual Integration Environment (GH VIE). The result is more flexible and cost-effective testing.

Spirent is a global leader in test and measurement solutions for new communications technologies. Its flagship application testing product provides capacity, security and performance testing for network infrastructures, web application infrastructures and virtual/cloud infrastructures to ensure Quality of Service and Quality of Experience for end customers.

iTrinegy's family of network emulation products recreate a wide variety of networks (cloud, WAN, wireless LAN, 3G, GPRS, 4G/LTE, MPLS, radio, satellite) and impairments (bandwidth, latency, jitter, packet drops etc) to enable the realistic testing of application performance in deployment.

We have the tools to address all your testing needs, and the in-depth knowledge to support your selection. If you are thinking about investing in testing tools, talk to us.

“Getting the best out of load testing tools is a niche skill, and StarBase has the technical expertise to jump-start the whole process. As the projects expanded, it was also handy to find that as well as knowing the tools inside out, the StarBase consultants could also cope with the our work ethic.”

Accenture

StarBase is the UK's leading performance testing consultancy, trusted by major enterprises to mitigate IT systems risk since 1992. We ensure the consistent performance of our clients' key systems. As specialists, we possess an unrivalled depth of experience, knowledge and insight, creating smart and value-adding solutions for complex situations.

Performance Testing

Combining the best testing tools with effective processes can improve the bottom line

Testing Tools

Guidance on testing tool selection - the right tools for your technology challenges and to improve productivity

Functional Testing

Smarter processes and greater automation will reduce cost and duration of the project

Managed Testing

Let us take responsibility for all your testing requirements
